

Vehicle fitment review guide

A checklist for organizing a battery fitment conversation. This is not a compatibility database.

Identify the vehicle

- Manufacturer, model, trim and model year
- Engine type and displacement
- Start-stop system and major electrical accessories

Inspect the installed battery

- Voltage, Ah and CCA markings
- Case code and dimensions
- Terminal position and polarity
- Hold-down type and available clearance

Confirm before installation

- Check the vehicle manufacturer's specification
- Confirm charging-system requirements
- Use a qualified supplier or technician
- Never substitute solely on capacity or physical appearance

Record the recommendation

- Recommended model
- Evidence used for fitment
- Reviewer and review date
